

How to install

Gumroad

If you find it useful, you can drop a tip to support my work - or just **type €0 to get it for free**, no pressure.

Installation

Go to paths:

Mac : `/Users/**username**/Library/Application Support/REAPER`

Windows: `C:\Users**username**\AppData\Roaming\REAPER`

1. Make backup of `REAPER` folder (like `REAPER-copy`)
2. Remove `REAPER` folder
3. Open Reaper
4. Go to Settings -> General -> Import Configuration -> Use downloaded zip file from gumroad (do not unzip) -> OK -> Remove Local Data -> Import
5. Done

(If you want to restore backup, just copy `REAPER-copy` folder to `REAPER`)
